

# Fiber Lab 800

## Network Link & Delay Simulator

Portable for easy handling

Customized to specification

Designed for Corning® spools

Protects fiber from damage

The portable **Fiber Lab 800** is designed for those that are seeking a better way to manage and use spools of fiber on the bench top in the lab environment. Offering any specified lengths up to 30km of Corning® single mode, multimode, specialty, or ribbon fibers, the FL800 protects both the fiber and connectors from accidental damage while producing consistent results.

In addition to testing applications in the lab environment, the transparent casing of the FL800 makes it a great solution for sales teams and system demonstrations due to the visibility of the fiber spool.

### [Design a Fiber Lab 800](#)

To get started, simply share some of your preferred requirements with the M2 team:

- Fiber Type(s): any single mode, multimode, specialty, or ribbon fibers from Corning®
- Fiber Lengths/Delays: any custom lengths up to 30km by distance or delay value
- Connector Type: LC, SC, FC, ST, MPO

When you are ready to take the next step, a member of the M2 team or an authorized partner will personally help to determine the most efficient setup for your needs.
