

# Sidekick

## OTDR Launch Fiber Module

Up to 1km

Customized to specification

All fiber types

Multiple interface options

The **Sidekick** is a handheld, compact module that holds up to 1km of optical fiber for use alongside any OTDR device. Rugged yet still lightweight, the Sidekick is built to support frequent use in the field and includes a protective carrying case for transport and storage purposes.

The Sidekick offers two module interface styles, depending on user preference:

- **Style A: Bulkhead adapters** (separate leads can be replaced as needed if/when worn out)
- **Style B: Pass-through adapters** (continuous leads eliminate module connection points)

### Design a Sidekick

To get started, simply share some of your preferred requirements with the M2 team:

- **Fiber Type:** any single mode, multimode, or specialty fibers
- **Fiber Lengths:** any custom length up to 1km
- **Connector Type:** LC, SC, FC, ST
- **Interface Type:** Style A or Style B

When you are ready to take the next step, a member of the M2 team or an authorized partner will personally help to determine the most efficient setup for your needs.
