

Sidekick Plus

OTDR Training & Demo Solution

Includes in-line fiber events

Customized to specification

All fiber types

Compact, rugged module

The **Sidekick Plus** for OTDR training applications provides a portable, protected spool of fiber with built-in events that helps train technicians learning to use an OTDR. Measuring only 8.25"x7"x1.5" in size, this compact module offers up to 5km and can include multiple events a technician can expect to see like splices, reflective connectors, and fiber mismatches ("gainers").

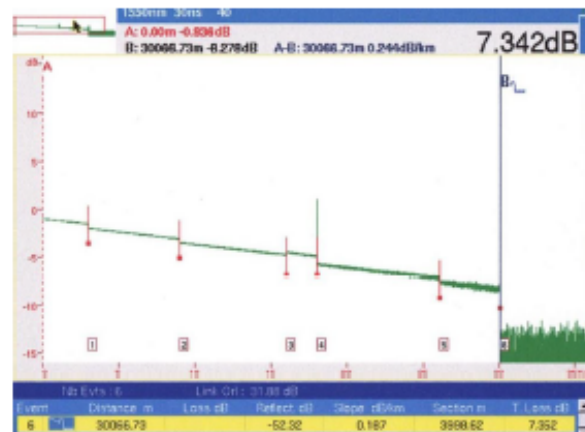

In addition to training scenarios, the SKP also serves as an excellent demonstration tool for OTDR manufacturers and sales teams that want to showcase the capabilities of their device.

Design a Sidekick Plus

Contact M2 Optics with your preferred fiber type, fiber length, connector type, and event configuration.

OTDR Trace, multiple events:

1. Splice
2. Splice
3. "Gainer" / fiber mismatch
4. Connector
5. Splice
